***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 02/17/2006 has been entered.

***Reasons for Allowance***

2. Claims 1-19, 26-32, and 43 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Please see the previous office action and applicant's argument filed on 11/03/2004, 02/28/2005, and 11/03/2005.

Regarding claim 1, none of the prior art of record teaches or suggests the combination of a method for timestamping events in a primary event stream, wherein the method comprising: timestamping events in each of the plurality of secondary event streams such that each timestamp represents a known value at the occurrence of a given event, wherein each timestamp has a first component comprising a specific clock cycle of a reference clock, and a second component comprising a time at which the given event occurs within the specific clock cycle. It is these limitations as they are claimed in the combination with other limitations of claim, which have not been found,

Art Unit: 2863

taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Regarding claim 10, none of the prior art of record teaches or suggests the combination of a timestamp system comprising: a plurality of timestamp circuits, each timestamp circuit coupled to receive a respective secondary event stream from the event stream distributor, wherein each of the plurality of timestamp circuits record the times at which events occur in the respective received secondary event stream such that each recorded time represents a known value at the occurrence of a given event, wherein each of the recorded times have a first component comprising a specific clock cycle of a reference clock and a second component comprising a time at which the given event occurs within the specific clock cycle. It is these limitations as they are claimed in the combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Regarding claim 26, none of the prior art of record teaches or suggests the combination of a circuit for apportioning events in a signal, wherein the circuit comprising: a first counter coupled to receive the signal; and a first plurality of gates, each gate of the first plurality of gates coupled to receive the signal and each gate of the first plurality of gates coupled to receive a respective control signal from the first counter, wherein the events of the signal are apportioned among the outputs of the first plurality of gates as a function of the respective control signal from the first counter. It is these limitations as they are claimed in the combination with other limitations of claim,

Art Unit: 2863

which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
